

ON KEY

COLOUR UI GUIDE

OnKey Plus comes designed with a built-in, baseline theme that can be used as-is, or changed to suit your brand.

This includes default colors for primary, secondary, and their variants. This baseline theme also includes additional colors that define your UI, such as the colors for backgrounds, surfaces, errors, typography, and iconography. All of these colors can be customized for your own brand.

COLOUR UI GUIDE

Surfaces

Neutral colours are used for all surfaces in On Key Plus, which helps to focus the eye on important data and content.

Backgrounds

The background appears behind all other surfaces in an app.

Top and bottom app bars

The way color is applied to top and bottom app bars helps users identify them and understand their relationship to surrounding UI elements.

Top Menu Bar

Appears at the very top of the screen, and forms the background of main navigational menu items.

1

r244 g244 b244
#F4F4F4

Header Bar

Appears at the top of all other menus, cards, modals and dialogs.

2

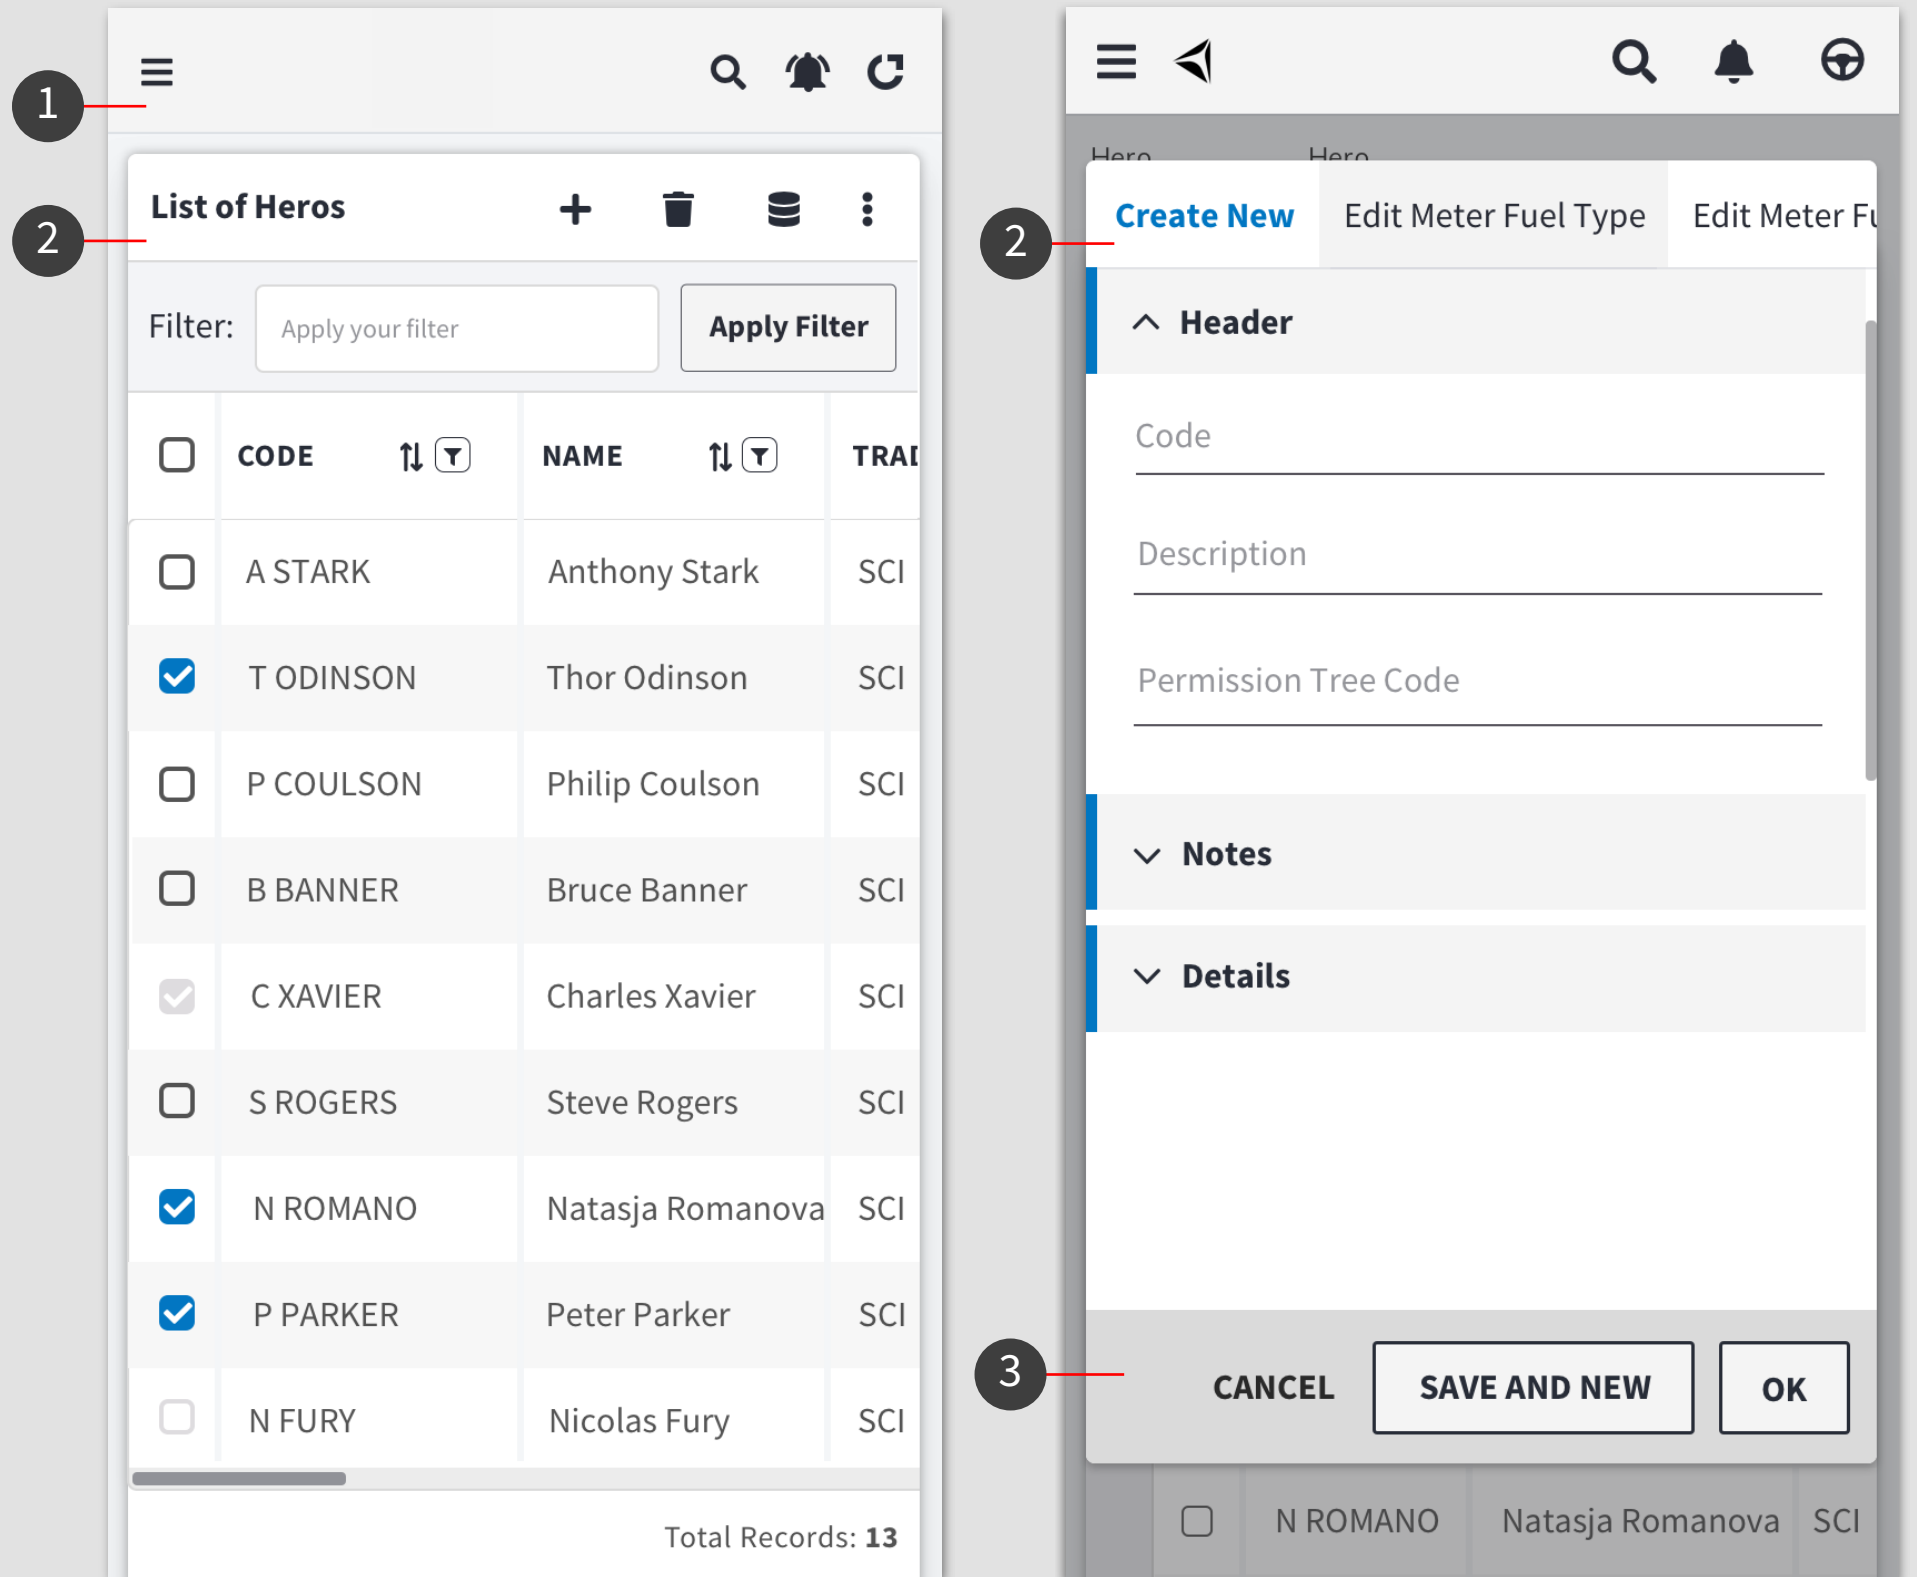

```
r255 g255 b255
#FFFFFF
```

Footer Bar

Appears at the bottom of modals and dialogs.

3

```
r218 g218 b218
#DADADA
```

Interaction states

Subtle colour changes are applied to indicate when you are hovering over an item, or when an item is selected.

Alerts

Alert colours are used to indicate an error, a warning or a successful completion of a task.

Please note: In order to adhere to web accesibility standards, alert colours can NOT be used in isolation to convey meaning. An appropriate icon needs to be used in conjunction with the colour, as seen below.

Tabs

Tabs organize and allow navigation between groups of content that are related and at the same level of hierarchy.
